TITLE: Multifunctional pneumatic logical device. Class 42, No. 174445 [Announced by the Organization of the State Committee on Instrument Construction, Means of Automation, and Control Systems, (Organizatsiya gosudarstvennogo komiteta po preborostroyeni-
iyu, sredstvav avtomatizatsii i sistemam upravleniya)]

SOURCE: Byulleten' izobreteniy i tovarnykh znakov, no. 17, 1965, 93-94

TOPIC TAGS: pneumatic device, logic element, *function*

ABSTRACT: This Author Certificate introduces a multifunctional logical device containing a slide valve for performing logical functions with two variables. To reduce the number of input units, the head channel is coupled with one of the control chambers, the axis of which lies in the diagonal plane of the chamber. To increase the speed of operation, the device contains two series-connected chambers with coding plates and input units. The chambers are coupled with supply and output channels, and the plate in the first chamber performs a function inverse to the given function, while the plate in the second chamber performs the given function. TITLE: Study of the individual stages of potassium ozonide synthesis

SOURCE: Soveshchaniye po khimii perekisnykh soyedineniy. Second, Moscow, 1961. Khimiya perekisnykh soyedineniy (chemistry of peroxide compounds); Doklady* soveshchaniy. Moscow, Izd-vo AN SSSR, 1963, 193-196

TOPIC TAGS: potassium ozonide, potassium ozonide synthesis, potassium hydroxide, boiling layer principle, ozonizer, ozonide, potassium

ABSTRACT: In order to explain the conditions which secure the achievement of a product with a maximum potassium ozonide content, the authors studied the effect of the temperature and the ozone concentration on the speed of the potassium ozonide formation process. Potassium ozonide synthesis in these experiments was done in a reactor operating on the "boiling" layer principle. Experiments were conducted within a wide temperature range of from -20°C to $+5^{\circ}\text{C}$ with an ozone concentration of 5-6%. The results of the effect of the temperature and the concentration are shown in graphs. A diagram of the laboratory installation is presented. It is shown that the reaction of the potassium ozonide formation also occurs at a positive temperature

Card 1/2

Abstract: The influence of pH on the waves of pyrrole, pyridine and quinoline aldehydes was studied. The E_1 of the anion differs from the E_1 of the non-dissociated acid in the case of the 5-pyrrolealdehyde-2-carboxylic acid. The reduction of the quinoline ring proceeds at more negative E-s than the reduction of aldehyde group in the case of quinoline derivatives.

TITLE:

A nomogram of smoothed points for the correlation between the angles of emission of nuclear reaction fragments

PERIODICAL: Atomnaya energiya, v. 13, no. 6, 1962, 588 - 591

TEXT: The method of point smoothing (Nomografiya - Nomography, M. Gostekh-teorizdat, 1949) was used to construct the angular correlation of directions of flight (angles ψ_1, ψ_2) of the products emitted in two-particle nuclear reactions. If ψ is the c.m. angle of particle emission, the parametric relations

$$\operatorname{ctg} \psi_1 = \frac{q_1 + \cos \psi}{\sin \psi}, \quad \operatorname{ctg} \psi_2 = \frac{q_2 - \cos \psi}{\sin \psi} \quad (1)$$

can be used for nomogram construction; the quantities q_1 and q_2 are functions of the particle masses and the energy of the projectile particles,

TITLE: Nomograms for determining the height of potential barrier and for Breit-Wigner formula

SOURCE: Atomnaya energiya, v. 18, no. 1, 1965, 61-62

TOPIC TAGS: graphic technique, nuclear property

ABSTRACT: Equations were developed for two nomogram elements (the scale and the binary fields) in order to determine the potential barriers and for the Breit-Wigner formula. The method of aligned points was used for the first nomogram, and the principle of superimposition was used for the second nomogram. Orig. art. has: 7 formulas, 3 figures, 1 graph.

TITLE:

On Topographical-geodetical Multipurpose Detachments

PERIODICAL:

Geodeziya i kartografiya, 1959, Nr 10, pp 21-22 (USSR)

ABSTRACT:

It is pointed out that a subdivision of these detachments into geodetical and topographical teams would be unsuitable under the conditions prevailing in the Soviet Far East and East Siberia. The working places lie in very sparsely populated areas far from the railroad. When two detachments appear on the same spot they come into conflict with one another as either tries to gain the better living conditions (accommodation, employment of laborers, office rooms, etc.). It is requested that in future a large subdepartment (expedition, detachment) will do all work in the afore-mentioned area of the Soviet Far East and East Siberia.

TITLE: The Use of Wastes in the Rubber Industry (Ob ispol'zovanii otkhodov rezinovogo proizvodstva)

PERIODICAL: Kauchuk i Rezina, 1958, Nr 5, p 36 (USSR)

ABSTRACT: Waste material of the rubber and tyre industry cannot generally be re-used. It has now been found that these wastes can be used as roofing material. Methods for utilizing this waste material by the factory "Krasnyy treugol'nik" are described. This factory produces corrugated textile-rubber sheets which are 1100 x 500 mm and 6.6 mm thick. They can easily be dyed and are more stable than asphaltting roofing paper or rubberoid. During one shift about 90 sheets can be finished on one single press at a cost of 3 roubles per sheet. Output

Primeneniye alyuminiyevykh splavov v sudostroyenii (The Utilization of Aluminum Alloys in Shipbuilding) Leningrad, Sudpromgiz, 1961. 290 p. 3300 copies printed.

Reviewers: D. I. Baykov and B. V. Rybalko; Scientific Ed.: B. V. Rybalko; Ed.: A. I. Kuskova; Tech. Ed.: R. K. Tsai.

PURPOSE: This book is intended for technical personnel of design bureaus and plants and may also be used as a textbook by students in shipbuilding departments at schools of higher education and tekhnikums.

COVERAGE: Aluminum alloys used in shipbuilding in the form of plates, shapes, and special semifinished products are reviewed. The principles of metalworking and various types of joints used for aluminum-alloy parts are discussed. Primary attention is given to the use of aluminum alloys in marine vessels of various types and purposes. Special features of constructions, parts, and equipment made of aluminum alloys and certain methods applied to determine the dimensions

Detd pH values corr to the start of colloidal Ni hydrate formation in sulfate, chloride and nitrate solns by potentiometric titration with glass electrodes and by means of Tyndall cone. In nitrate and chloride solns the pH values are same. Pptn of hydrates in sulfate solns starts in more alk

183748

USSR/Chemistry - Electrolytic Refining of Metals (Contd) Jun 51

medium. H_2BO_3 lowers pH of the start of hydrate formation more sharply in chloride and nitrate than in sulfate solns. $(NH_4)_2SO_4$ lowers pH more than H_2BO_3 in sulfate solns. Effect of both buffers in chloride and nitrate solns is same. Increased hardness of cathodic deposits obtained from solns with addn of $(NH_4)_2SO_4$ under customary electrolysis conditions appears to be detd by large quantity of Ni hydrates in layer near cathode Under conditions of Ni electrolysis, formation of colloidal metal hydrates is more likely than formation of basic metal componds.

Some Fusulinidae and small Foraminifera in the Bashkir sediments
of the Greater Donets Basin. Trudy Inst. geol. nauk AN URSS Ser.
strat. i paleont. no.48:31-59 '64 (MIRA 18:1)

AUTHORS: Fotiyevskaya, E. D., Yartseva, M. V. SOV/20-120-3-49/67

TITLE: On the Characteristics of the Sediments of the Bashkirekaya Stage Deposits in the Western Continuation of the Donetz Basin According to Their Foraminiferal Fauna (K kharakteristike otlozheniy bashkirskego yarusa zapadnogo prodolzheniya Donetskogo basseyna po faune foraminifer)

PERIODICAL: Doklady Akademii nauk USSR 1958, Vol. 120, Nr 3, pp.615-616 (USSR)

ABSTRACT: The sediments of the said stage discovered by drilling in recent years are deposited transgressively on a washed-out surface of the Lower Namurian and Upper Visé sediments of the Lower Carboniferous age. A lithological characteristic of these layers is given. Data in publications on the foraminiferal fauna (Refs 1 - 3) are insufficient for the purpose of correlating the said layers of the Bashkirsckaya stage with the layers provided with indices. On the basis of the investigated foraminiferal fauna 5 microfauanal horizons were separated, which, to all appearance represent analogues of the suites $C_1^5 - C_2^4$ of the open Donbass. The hori-

Card 1/3

SOV/20-120-3-49/67

On the Characteristics of the Sediments of the Bashkirskaya Stage Deposits
in the Western Continuation of the Donetz Basin According to Their Foraminiferal Fauna

zones I. and II. correspond to the Lower Bashkirskaya sub-stage of the suites C₁, C₂¹. The III., IV. and V. correspond to the Upper Bashkirskaya sub-stage (suite C₂, lower part of the C₂¹, upper part of the C₂², lower part of the C₄¹). These sub-stages and horizons are described lithologically as well as with respect to their foraminiferal fauna. A strata-to-strata examination of the microfauna of the Bashkirskaya sediments certifies the incompleteness of the cross-section of this stage in the western continuation of the Donbass. No analogues of the lower half of the suite C₅, as well as sediments being younger than the lower part of the suite C₄ can be found. The thickness suddenly reduces (from 2000 m to 350 m). In spite of some striking similarities with the fauna of the Donbass proper, the foraminiferal fauna is different to a considerable degree. A number of species and kinds appears earlier than in the Donbass. This is apparently conditioned by modified living conditions because of the nearness of the sea coast. There are 3 references, 3 of which are Soviet.
